

LUNULA LASER TREATMENT

Introducing the most advanced technology in fighting fungal nail infections available in New Zealand

Lunula cold laser kills nail fungus without the need for nail paints, oral medication or uncomfortable hot laser therapies. It is the safest, simplest and most effective treatment for fungal nail infections currently available, and we're proud to have been the first to bring it home to New Zealand.

HOW DOES IT WORK?

Our Lunula cold laser works by using two safe and effective laser beams simultaneously to:

- ✓ **Destroy the fungus and its spores**
- ✓ **Improve your immune response**
- ✓ **Increase circulation**

This stimulates blood flow, delivers nutrients back to your nails for healthy tissue growth, and helps protect against future fungal infections. Unlike hot laser, we use cold laser beams so you experience **no pain, no discomfort and there is no risk of burns.**

THE SUPERIOR ANTIFUNGAL TREATMENT

Cold Laser is clinically proven to be the safest and most reliable option available for the treatment of nail fungus when compared to traditional treatment options. The Lunula laser has excelled in clinical trials & is approved by the Food & Drug Administration (FDA).

TOPICAL TREATMENTS – up to 8.5% success rate

Topical treatments including lacquers, creams, paints and sprays available from pharmacies cannot penetrate below the surface of the nail, leaving patients frustrated from using costly creams repeatedly with a very low chance for success – between 5.5% and 8.5%*

ORAL TREATMENTS – up to 55%* success rate

Oral medications (tablets) are unsuitable for many patients and carry with them a risk for serious adverse effects. The research indicates that for patients taking oral antifungals, the resolution rate ranges from 14% to 55%*.

HOT LASER TREATMENTS

Hot laser carries a significantly higher risk of burns, discomfort and pain. The treatment is vulnerable to user error, with the practitioner needing to ensure every millimetre of nail is covered without burning the nail or surrounding skin. This impacts both efficacy and the chance of adverse effects.

COLD LASER – up to 97% success rate

Lunula cold laser has no side effects, no pain, is safe, simple, and effective. It has clinically proven success rates of between 83% and 97% after 4 treatments. We improve this by providing everything you need to reduce the risk of reinfection at home, including being just a phone call away from our highly-skilled team that specialises in the cold laser treatment of fungal nails.

THE RESULTS SPEAK FOR THEMSELVES

We're ecstatic with the results we achieve with more than 4 out of 5 patients extremely satisfied with the healthy, clear and fungus-free nails. Here are some of the progress achieved by our patients and those using the superior Lunula Cold Laser treatment.
